

My Patients

Feature Overview

The "My Patients" feature provides healthcare professionals with a dedicated workspace to view, search, and manage patient records. It offers a holistic overview of patient information, including medical history, prescriptions, Investigations, and vital signs.

Key features of the "My Patients" feature include:

1. **Patient Record:** Access comprehensive patient profiles containing personal details, medical history, and relevant clinical information.
2. **Medical Review:** Perform medical reviews, assess patient conditions, and update treatment plans within the platform.
3. **Prescriptions:** View and manage patient prescriptions, including medication details, dosage, and refill information.
4. **Vital Signs:** Monitor and record patient vital signs, such as blood pressure, heart rate, and temperature.
5. **Progress Tracking:** Track patient progress, view trends, and record notes to evaluate treatment effectiveness.

My Patients Workflow

To effectively utilize the "My Patients" feature, follow these steps:

1. **Login:** Open the SPICE application and sign in using your credentials. Ensure a stable internet connection for seamless access to patient records.
2. **Navigate to "My Patients":** Once logged in, locate the "My Patients" section in the app's navigation menu. Click on it to enter the "My Patients" workspace.
3. **Search and Select Patient:** Use the search functionality to find a specific patient by name, ID, or other identifying information. Select the desired patient from the search results to access their profile.
4. **View Patient Information:** In the patient profile, review the medical history, prescriptions, Investigations, Diagnosis and vital signs. Familiarize yourself with the relevant information to make informed decisions.
5. **Perform Medical Review:** Conduct a medical review by assessing the patient's condition, reviewing their medical history, and updating treatment plans accordingly. Document any observations or changes in the patient's condition.

6. **Coordinate Care:** Collaborate with other healthcare professionals involved in the patient's care. Share information, assign tasks, and communicate updates to ensure coordinated and comprehensive care delivery.
7. **Manage Prescriptions:** Access the patient's prescription records, review medication details, monitor refill status, and make any necessary adjustments. Ensure accurate and up-to-date medication management.
8. **Monitor Vital Signs:** Regularly record and monitor the patient's vital signs using the platform's integrated tools. Keep track of changes, identify trends, and make informed decisions based on the recorded data.
9. **Track Patient Progress:** Continuously evaluate the patient's progress, record notes, and update treatment plans as required. Monitor trends, review previous assessments, and make data-driven decisions to optimize patient care.
